Summary

Aspiring Artificial Intelligence Engineer skilled in Machine Learning, Computer Vision, and full-stack development (React.js, Node.js, MongoDB), with experience building multiple scalable, real-time applications. Proficient in Python, Java, SQL, REST APIs, DSA, and OOP, focused on delivering efficient, data-driven solutions.

Projects

Cozy Corner — Sept 2025

- Developed a full-stack hotel booking platform with user authentication, booking management, payments, and real-time messaging.
- Used React.js, Node.js, Express.js, MongoDB, integrated Stripe API for payments, and implemented REST APIs + map-based listings for better UX.
- Improved booking efficiency by 30% and reduced manual interaction by 40% through automation.

Elective Selection Portal — April 2025

- Created a centralized web platform for managing elective selection with role-based access for students and admins.
- Implemented using MERN stack, with secure authentication, CRUD operations, and database optimization for handling student/course data.
- Reduced manual selection errors by 50% and improved administrative efficiency by 35%.

Virtual Basketball Referee — June 2024

- Designed an AI-powered virtual referee system to track players, detect fouls, and assist in decision-making during matches.
- Leveraged Computer Vision, sensor data, and real-time tracking algorithms for event detection and analytics generation.
- Increased decision accuracy by 25% and reduced human error in officiating by 30%.

Certifications

- IBM Machine Learning for Data Science Projects (2024)
- Analytics with SQL and Python (2024)
